PROFESSIONAL SUMMARY

BSCS student at NUML (GPA: 3.64/4.00) and practicing full-stack web developer with verified internship experience. Skilled in MERN stack, Node.js/Express backend development, and multi-framework web applications including Laravel (PHP) and Java Servlets. Currently leading Final Year Project research on an Underwater Object Identification and Imaging System using Industrial Frequency Electromagnetic (IFE) sensing, Kalman filtering, and signal processing — validated on the NOAA World Ocean Atlas 2023 real dataset. Actively seeking internship and junior developer roles.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), PHP, Java, Python, C++, Assembly, HTML5, CSS3

Frontend Development: React.js, EJS, Blade (Laravel), Tailwind CSS, Responsive Web Design

Backend Development: Node.js, Express.js, Laravel (PHP), Java Servlets, RESTful API Design, MVC Architecture

Databases: MongoDB, MySQL

Tools and Platforms: Git, GitHub, VS Code, Postman, MATLAB, Simulink, Apache Tomcat, Composer, Vercel

Concepts: MERN Stack, MVC, Session Management, CSRF Protection, Signal Processing (EMD, VMD, Kalman Filter), OOP, Image Segmentation

WORK EXPERIENCE

Web Development Intern

Digital Empowerment Network | Islamabad, Pakistan (Virtual) | Certificate ID: STU-WD-251-641
July 2025 - September 2025

- Developed and maintained responsive web applications using React.js, ensuring cross-device compatibility.
- Designed and implemented RESTful APIs with Node.js and Express.js, integrated with MongoDB for data persistence.
- Delivered complete MERN stack modules independently within an agile virtual environment, consistently meeting deadlines.
- Debugged production issues and optimized application performance across frontend and backend layers.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

National University of Modern Languages (NUML) | Islamabad, Pakistan
February 2023 - February 2027 (Expected) | GPA: 3.64 / 4.00

PROJECTS

Underwater Object Identification and Imaging System (Final Year Project)

NUML, Dept. of Software Engineering | Supervisor: Dr. Muhammad Tahir

December 2025 - Present

- Developing a distributed multi-node Industrial Frequency Electromagnetic (IFE) sensor network to detect, track, and classify underwater ferromagnetic objects including shipwrecks, submarines, and pipelines.
- Implementing dual-parameter Kalman Filter fusing GPS node positions with EM perturbation measurements for real-time trajectory estimation.
- Applying Hashin-Shtrikman bounds for material classification and dimensional analysis across synchronized sensor nodes.
- Validating all algorithms against the NOAA World Ocean Atlas 2023 real dataset; building MATLAB App Designer desktop interface for interactive simulation.

Personal Portfolio Website

Node.js | Express.js | EJS | Deployed on Vercel

Link: my-portfolio-weld-ten.vercel.app | github.com/Muntahasiddique/MyPortfolio

- Deployed full-stack personal portfolio with responsive design, dynamic project showcase, and contact integration. Live and accessible at the link above.

Express E-Commerce Engine

Node.js | Express.js | EJS | CSS | MVC Architecture

Link: github.com/Muntahasiddique/Express-E-Com-Engine

- Full-stack e-commerce application implementing session-based authentication, CSRF protection, product management, admin controls, and MVC architecture.

E-Commerce MERN Application

React.js | Node.js | Express.js | MongoDB

Link: github.com/Muntahasiddique/Ecommerce_Mern

- Full-stack online store with React frontend and Express/Node.js backend. Implements product listings, cart management, and user authentication.

Laravel Food Application

Laravel | PHP | Blade Templates | Tailwind CSS | MySQL

Link: github.com/Muntahasiddique/Laravel_FoodApp

- Full-stack food ordering web application demonstrating MVC architecture, Eloquent ORM, and Laravel routing in a real-world context.

Servlet-Based Book Management System

Java Servlets | JSP | MySQL | Apache Tomcat

Link: github.com/Muntahasiddique/Servlet-based-book-managment-system

- Full-stack Java web application for library management with CRUD operations, role-based authentication (Librarian vs Student), and dynamic reporting.

Coin Segmentation System

MATLAB | Image Processing

Link: github.com/Muntahasiddique/CoinsProject

- Image processing pipeline for coin detection and segmentation using edge mask creation, erosion, dilation, and masked region extraction.

CERTIFICATIONS

React Foundations and Core Frontend Development | Packt / Coursera | July 2026

MATLAB Onramp | MathWorks | 2025

Simulink Onramp | MathWorks | 2025
